

Program Guidelines

Commercial and Industrial Advanced Lighting Program

This is a Retrofit Program

Cooperatives of the East Kentucky Power Cooperative System offer an energy efficient program targeting Commercial and Industrial Lighting.

This program offers incentives to commercial and industrial customers to install high efficiency lamps and ballasts in their facilities. LED exit signs, T-5 fluorescent fixtures, and advanced controls are examples of eligible technologies.

Eligibility

- Customer shall be on a retail commercial or industrial rate
- Shall be in good standing with the Member System
- Shall have been in business for at least 2 years prior to 1-1-2016
- Lighting shall be in active areas (inactive warehouses or storage areas don't comply)
- Normal lighting load of at least 50 hours per week

Incentive

- \$213 / kW to the customer for lighting load reduction
- \$6,000 total per commercial facility for 2016
- \$12,000 total per industrial facility for 2016

Instructions

- Start by contacting your local cooperative
- The local cooperative or Envision Energy Services will visit the customer before the retrofit to identify fixtures to be upgraded and to determine eligibility
 - They will note the lighting type, wattage, and number of fixtures
- The customer proceeds with the retrofit
- After retrofit, contact your local cooperative again
- The local cooperative or Envision Energy Services will visit the customer again to verify changes
 - They will note actual fixtures changed and wattage
- Nolin along with Envision Energy Services will calculate actual lighting load reduced based on the two visits to the customer. They will handle all of the paperwork. Rebate will be granted based on eligibility and actual lighting load kW reduced.
